CASE STUDY

Leading the brand and website redesign for a
decentralized IoT network

(re-)branding

Web Design

Digital Design

Briefing

[MXC Foundation](#), the organization behind MatchX, develops a range of blockchain-based IoT products.

With our team at Loominate, we undertook the task of **rebranding their corporate identity and redesigning their website**, [mxc.org](#), to reflect their innovative technology and future vision.

Challenges

1. **Reimagining** the brand while maintaining a connection to its roots
2. **Translating** complex blockchain and IoT concepts into an engaging visual language
3. **Designing** an extensive website with multiple pages and diverse content
4. **Creating** a cohesive design system enabling a clean handover for the build on Webflow

Process

Brand Discovery

We began with our signature Brand Discovery workshop, exploring MXC's core principles, 20-year vision, and competitive positioning.

MXC's roadmap included expansion into the Metaverse

The target audience's affinity towards gaming environments, with aesthetics such as CyberPunk and Vaporwave

Got aligned behind the Brand Promise: "To bridge the gap between the real and virtual world, by connecting devices and people via social networks"

Process

Defining the Visual Style

Based on the workshop insights, we created several StyleScapes exploring Vaporwave, CyberPunk, and Futuristic aesthetics. For the logo redesign, we explored variations that incorporated:

- Minimalist design principles
- Sci-fi shapes and graphics, including the MXC-relevant hexagon shape
- Gradient variations & color palettes inspired by Vaporwave aesthetics

Process

Comprehensive Branding

Using an in-house logo sketch from the MXC team as a starting point, we developed:

- A complete style guide for consistent corporate design across all touchpoints
- Brand elements that evoked a retro-futuristic feel, inviting viewers into MXC's virtual world
- Were able to pivot late in the logo design process and turn an in-house sketch into the final logo

Website Redesign

Our web design process was divided into four phases:

1 Content Development

- Conducted stakeholder interviews
- Transcribed and adapted existing content to align with the new brand direction

2 Low-fidelity Wireframing

- Created low-fidelity wireframes for each page
- Iterated based on client feedback

3 Visual Design on Figma

- Developed high-fidelity designs in Figma
- Incorporated immersive, retro-futuristic elements to reflect MXC's involvement in IoT and the Metaverse

4 Hand-over & Development

- Collaborated closely with our development partner
- Provided a staging environment for testing and feedback using markup.io

CASE STUDY

Designing the Brand and UI of a decentralised music marketplace: Autonomies

Branding

UX & UI Design

Web Design

Product Design

Art Direction

Briefing

Patrick's Portfolio • 2025

Autonomies' mission was to **empower electronic music artists and collectors** through a decentralized NFT marketplace.

As lead designer with one of the partners of the project, Loominate, **I helped develop the brand identity, marketing materials, landing page, and web app UI.**

The project aimed to create an intuitive platform that bridged traditional music collecting with Web3 technology.

AUTONOMIES

Challenges

1. **Translating** the physical experience of record collecting into a digital interface
2. **Simplifying** complex Web3 concepts for a non-technical audience
3. **Creating** a brand identity that appealed to electronic music enthusiasts
4. **Designing** an intuitive UI for browsing and purchasing NFT music

Process

Discovery and Research

We began with extensive research into the electronic music scene and NFT marketplaces. This involved:

- Analyzing and benchmarking existing music platforms and NFT marketplaces
- Conducting user interviews with electronic music collectors and artists
- Exploring the unique aspects of record shop experiences

Process

Branding and Landing Page

Working closely with the team, we developed a unique brand identity that balanced nostalgia for physical record stores with the innovation of Web3 technology. This informed the design of our announcement landing page.

- Subdued color palette inspired by vintage record sleeves

- Typography reminiscent of classic electronic music flyers

- Iconography blending turntables with blockchain symbols

Process

UI Design and Iteration

The core of our design was the homepage, conceived as a digital "record wall" to mimic the browsing experience in a physical store. The user was able to buy & sell songs or albums, created a profile and follow others users. We went through several iterations, focusing on:

- Intuitive navigation for browsing different genres and artists

- Clear presentation of NFT ownership and meta data

- Reduced to the essential: showcasing great music for real fans and creators

CASE STUDY

Frachtwerk Website Redesign: Reflecting New-Work Values Through Web Design

(re-)design

Web Design

Digital Design

Briefing

While working as Senior UX/UI & Web Designer at Jut-so, I played a crucial **role in the website redesign for Frachtwerk**, a New-Work organization specializing in IT consulting and software development.

The project aimed to **create a digital presence that truly reflected Frachtwerk's unique company culture** and values, while appealing to potential talent rather than traditional client acquisition.

Challenges

1. **Showcase** Frachtwerk's unique company culture and New-Work values
2. **Design** a website that breaks away from traditional IT company website norms
3. **Emphasize** talent acquisition over client acquisition
4. **Reflect** the company's commitment to transparency and technical expertise
5. **Create** a visual language that balances technological prowess with a human-centered approach

Process

1 Discovery & Research

- Analyzed Frachtwerk's existing brand elements and company values
- Studied New-Work principles and how to visually represent them
- Researched innovative approaches to tech company websites

3 Visual & Web Design

- Evolved the existing brand colors into modern gradient styles
- Incorporated grain and texture to add a human touch to the tech-focused design
- Selected and adapted geometric shapes to blend with imagery
- Designed custom UI elements that emphasize transparency

2 Concept Development

- Collaborated with the UX lead to refine wireframes and content structure
- Developed a visual strategy to represent transparency and New-Work values
- Created mood boards to explore the balance between tech and human elements

4 Implementation & Iteration

- Worked closely with developers to ensure accurate implementation of design elements
- Enabled the client to quickly adapt hero and section designs to final content and imagery
- Iterated on designs based on stakeholder feedback, user insights, and updated content

Website Redesign

Key Design Features

- Unique navigation highlighting company priorities
- Homepage: emphasis on company culture, blog articles, and employer ratings
- Gradient Styles: Modern interpretation of brand colors for both dark and light modes
- Transparency: Dark/Light Modes and use of UI blend modes to reflect company transparency
- Custom illustrations blending with imagery to represent tech expertise and human approach
- No logo wall or typical lead generation CTAs, focusing instead on company values and culture
