AI

Stetig & Wandel

Web & UX/UI Designer

Website redesign for German firm initiative. Increased Lead Gen for several partners.

[stetigwandel.de](#)

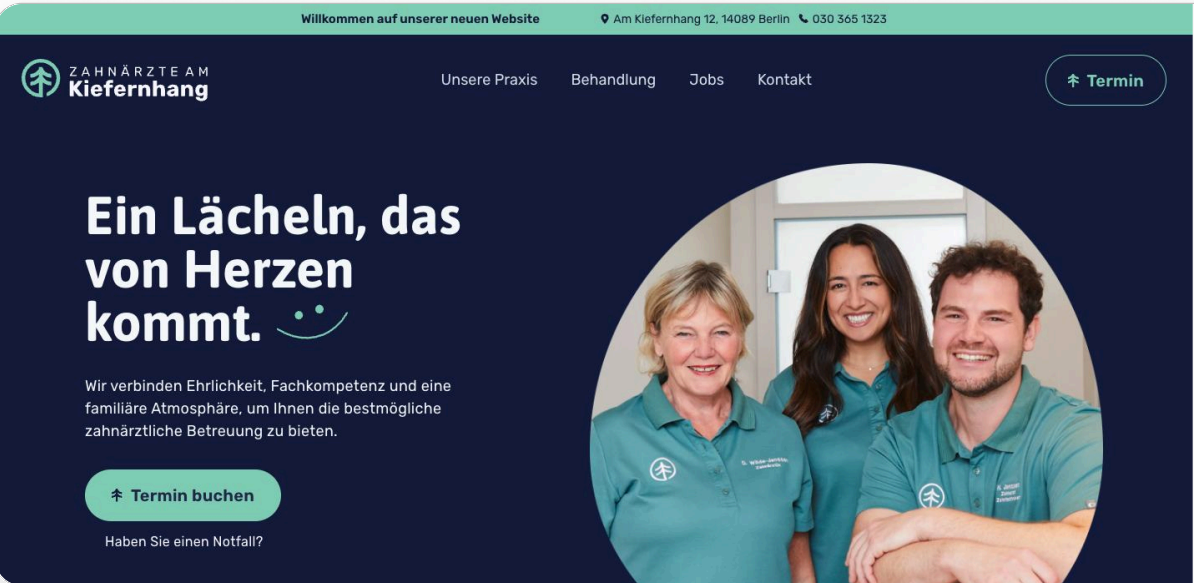

Frachtwerk

Web & UX/UI Designer

Website & brand design, focused on attracting talent. Relaunch led to recruitment growing significantly.

[frachtwerk.de](#)

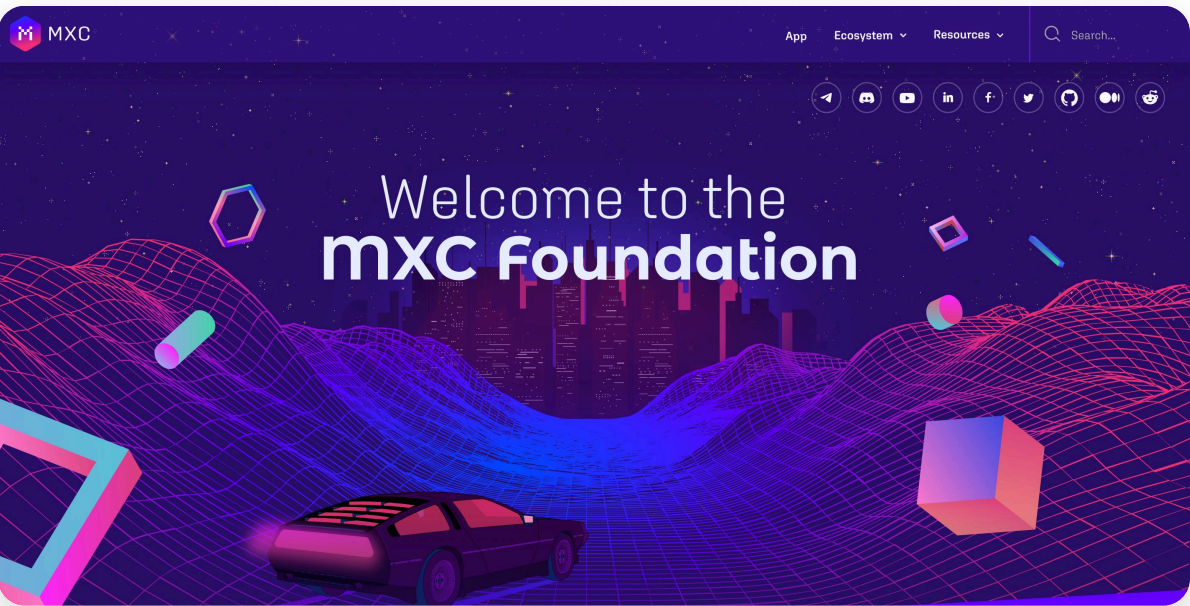

Zahnärzte Am Kiefernhang

Web & UX/UI Designer

Modern, accessible dentist practice website. Notable increase in online appointments.

into **instant plans**.

MY ROLE

Product Owner · UX/UI Design · Frontend

STACK

React · Next.js · TypeScript · PWA

TIMELINE

16 days to shipped PWA · ongoing

STATUS

In user testing · 228+ commits

TEAM

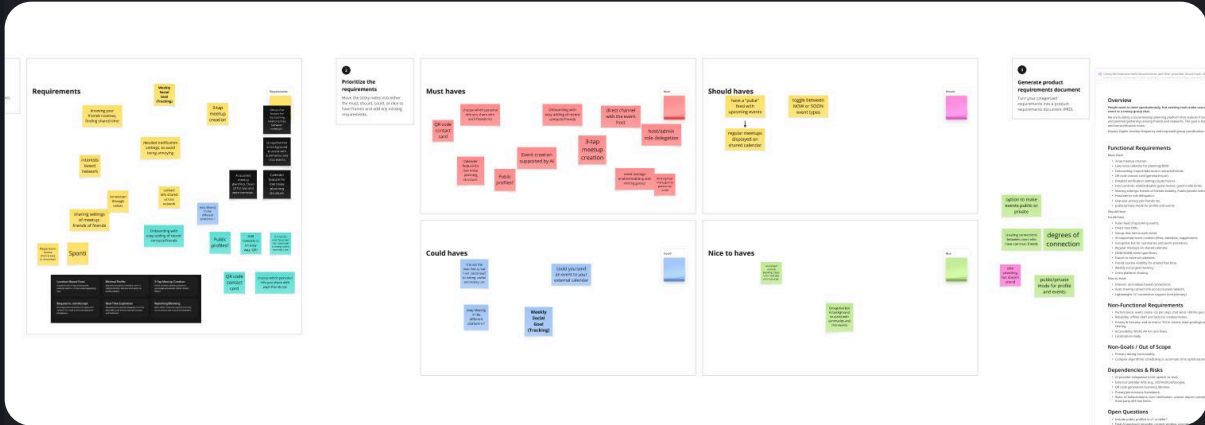

4 — design, frontend, backend, PM / QA

A social app for spontaneous meetups. I led a four-person team from a blank Miro board to a shipped React PWA in 16 days — owning the product definition, the UX/UI, and a share of the frontend build.

Five tools, ten threads, and no one wants to be first to ask. By the time a plan forms, the moment's gone — though 1 in 4 adults say they have no close friends to call. Sponti makes "I'm free, who's in?" a ten-second gesture.

how I led the product

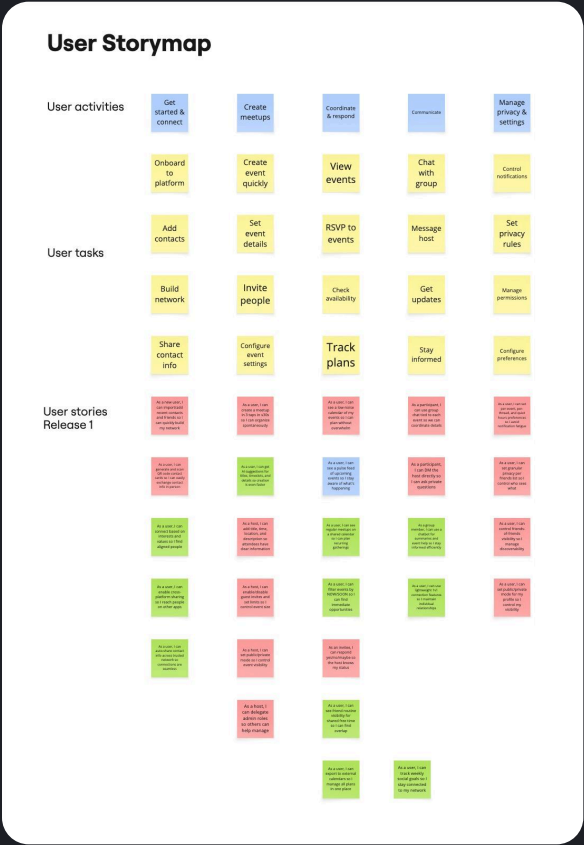

01 - DISCOVER

Scoping workshop

I facilitated the sessions that defined the core MVP and translated the requirements into a PRD.

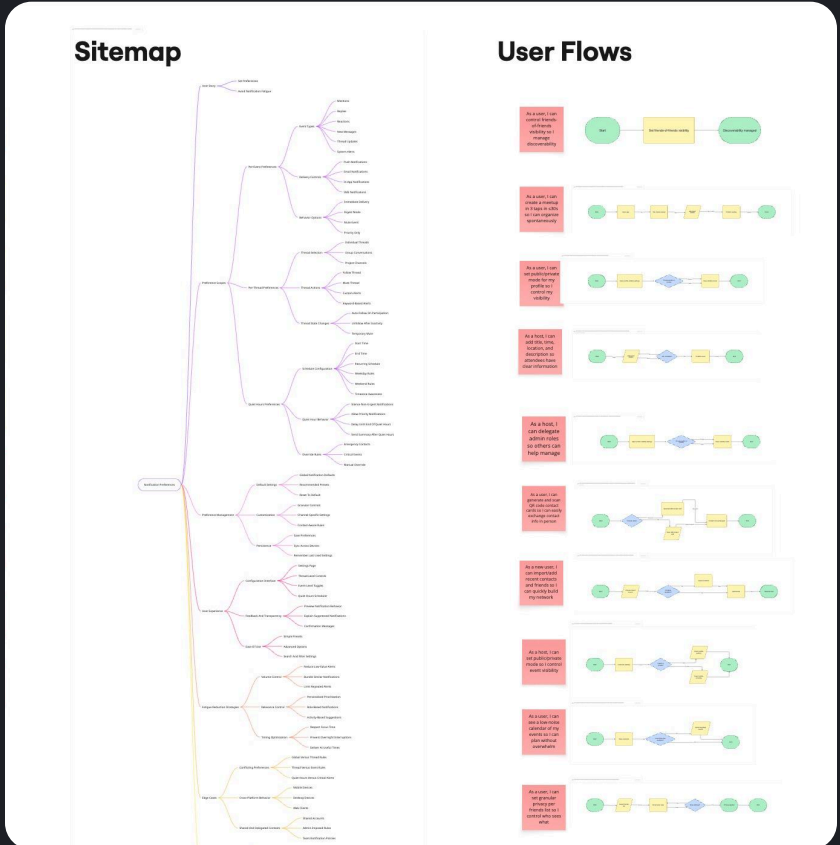

02 - DEFINE

user stories

Derived User Stories from the MVP requirements, with adjacent user tasks, prioritised for v1.

03 - MAP

core journeys

Mapped the screens out in Sitemap tree, and created User Flows out of the User Stories.

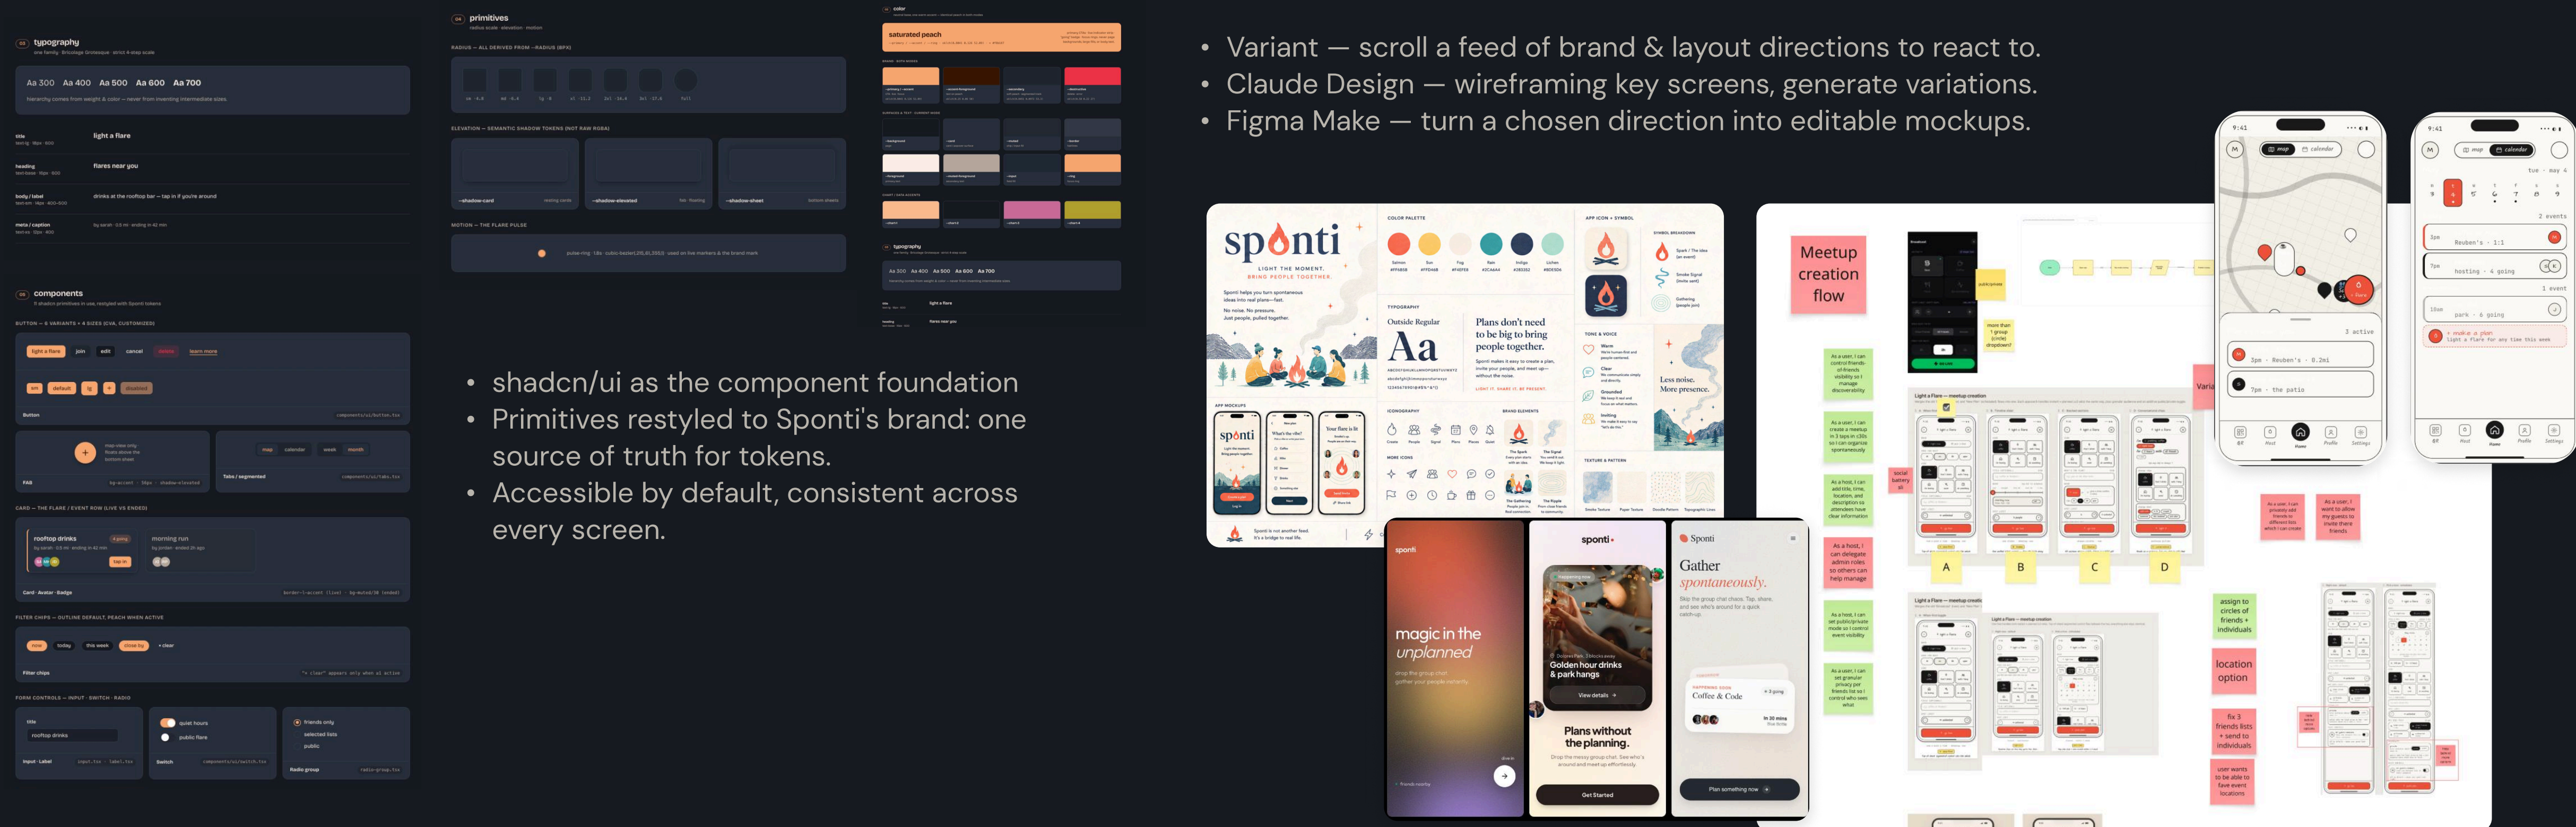

explore fast, ship **consistent.**

tech stack

- Next.js 16 (App Router) + React 19
- Tailwind v4 + shadcn (Nova preset)
- Radix UI primitives · vault drawer
- Lucide icons · Bricolage Grotesque (next/font)
- class-variance-authority · clsx · tailwind-merge
- Capacitor WebView wrapper (iOS / Android)

AI-AUGMENTED EXPLORATION

- Variant — scroll a feed of brand & layout directions to react to.
- Claude Design — wireframing key screens, generate variations.
- Figma Make — turn a chosen direction into editable mockups.

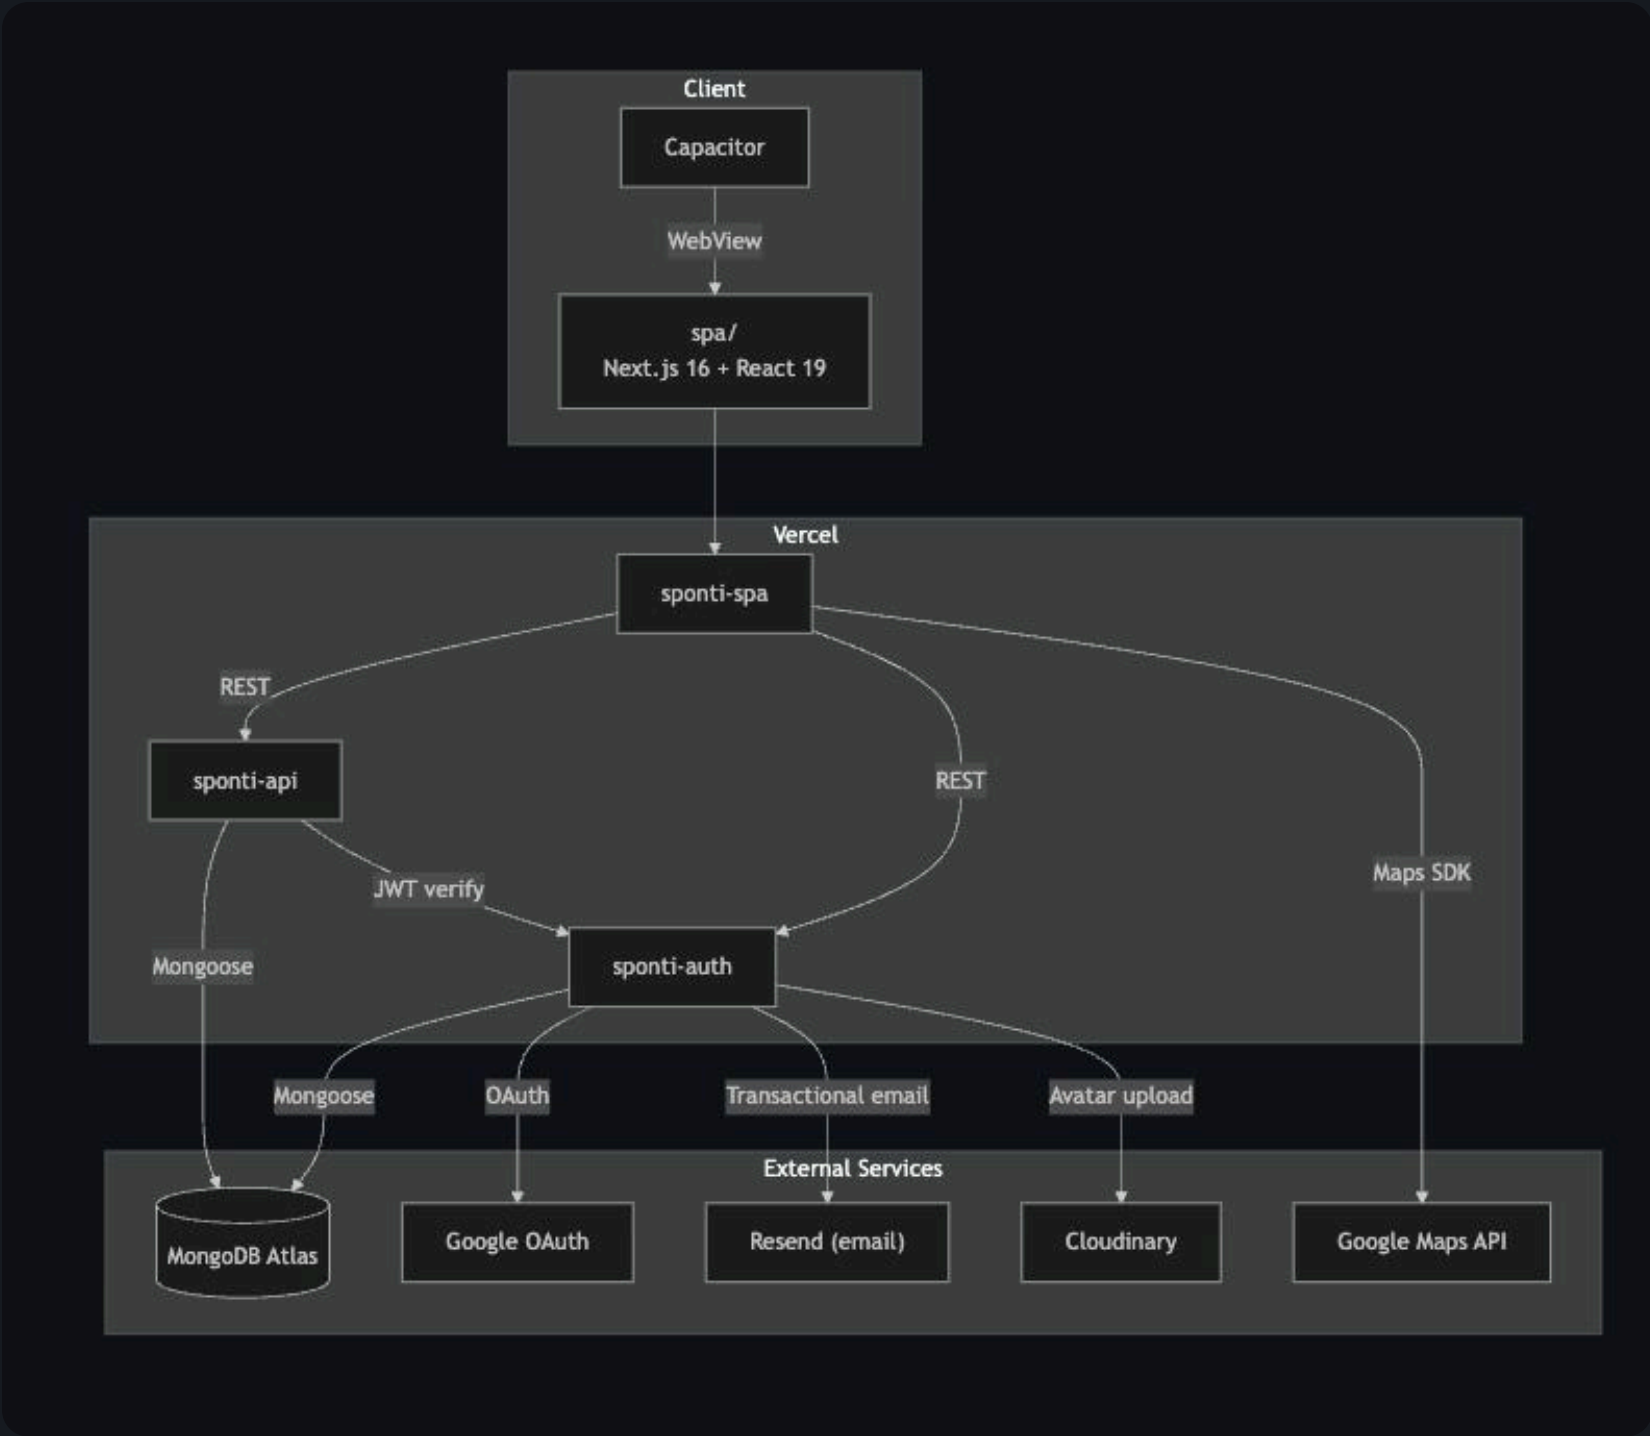

DESIGN TO CODE

AI did the bulk. We did the steering.

Not vibe coding. We used Claude Code and Codex to pressure-test the architecture and prototype tricky components before building the real thing — then reviewed, corrected, and integrated by hand.

THE BUILD

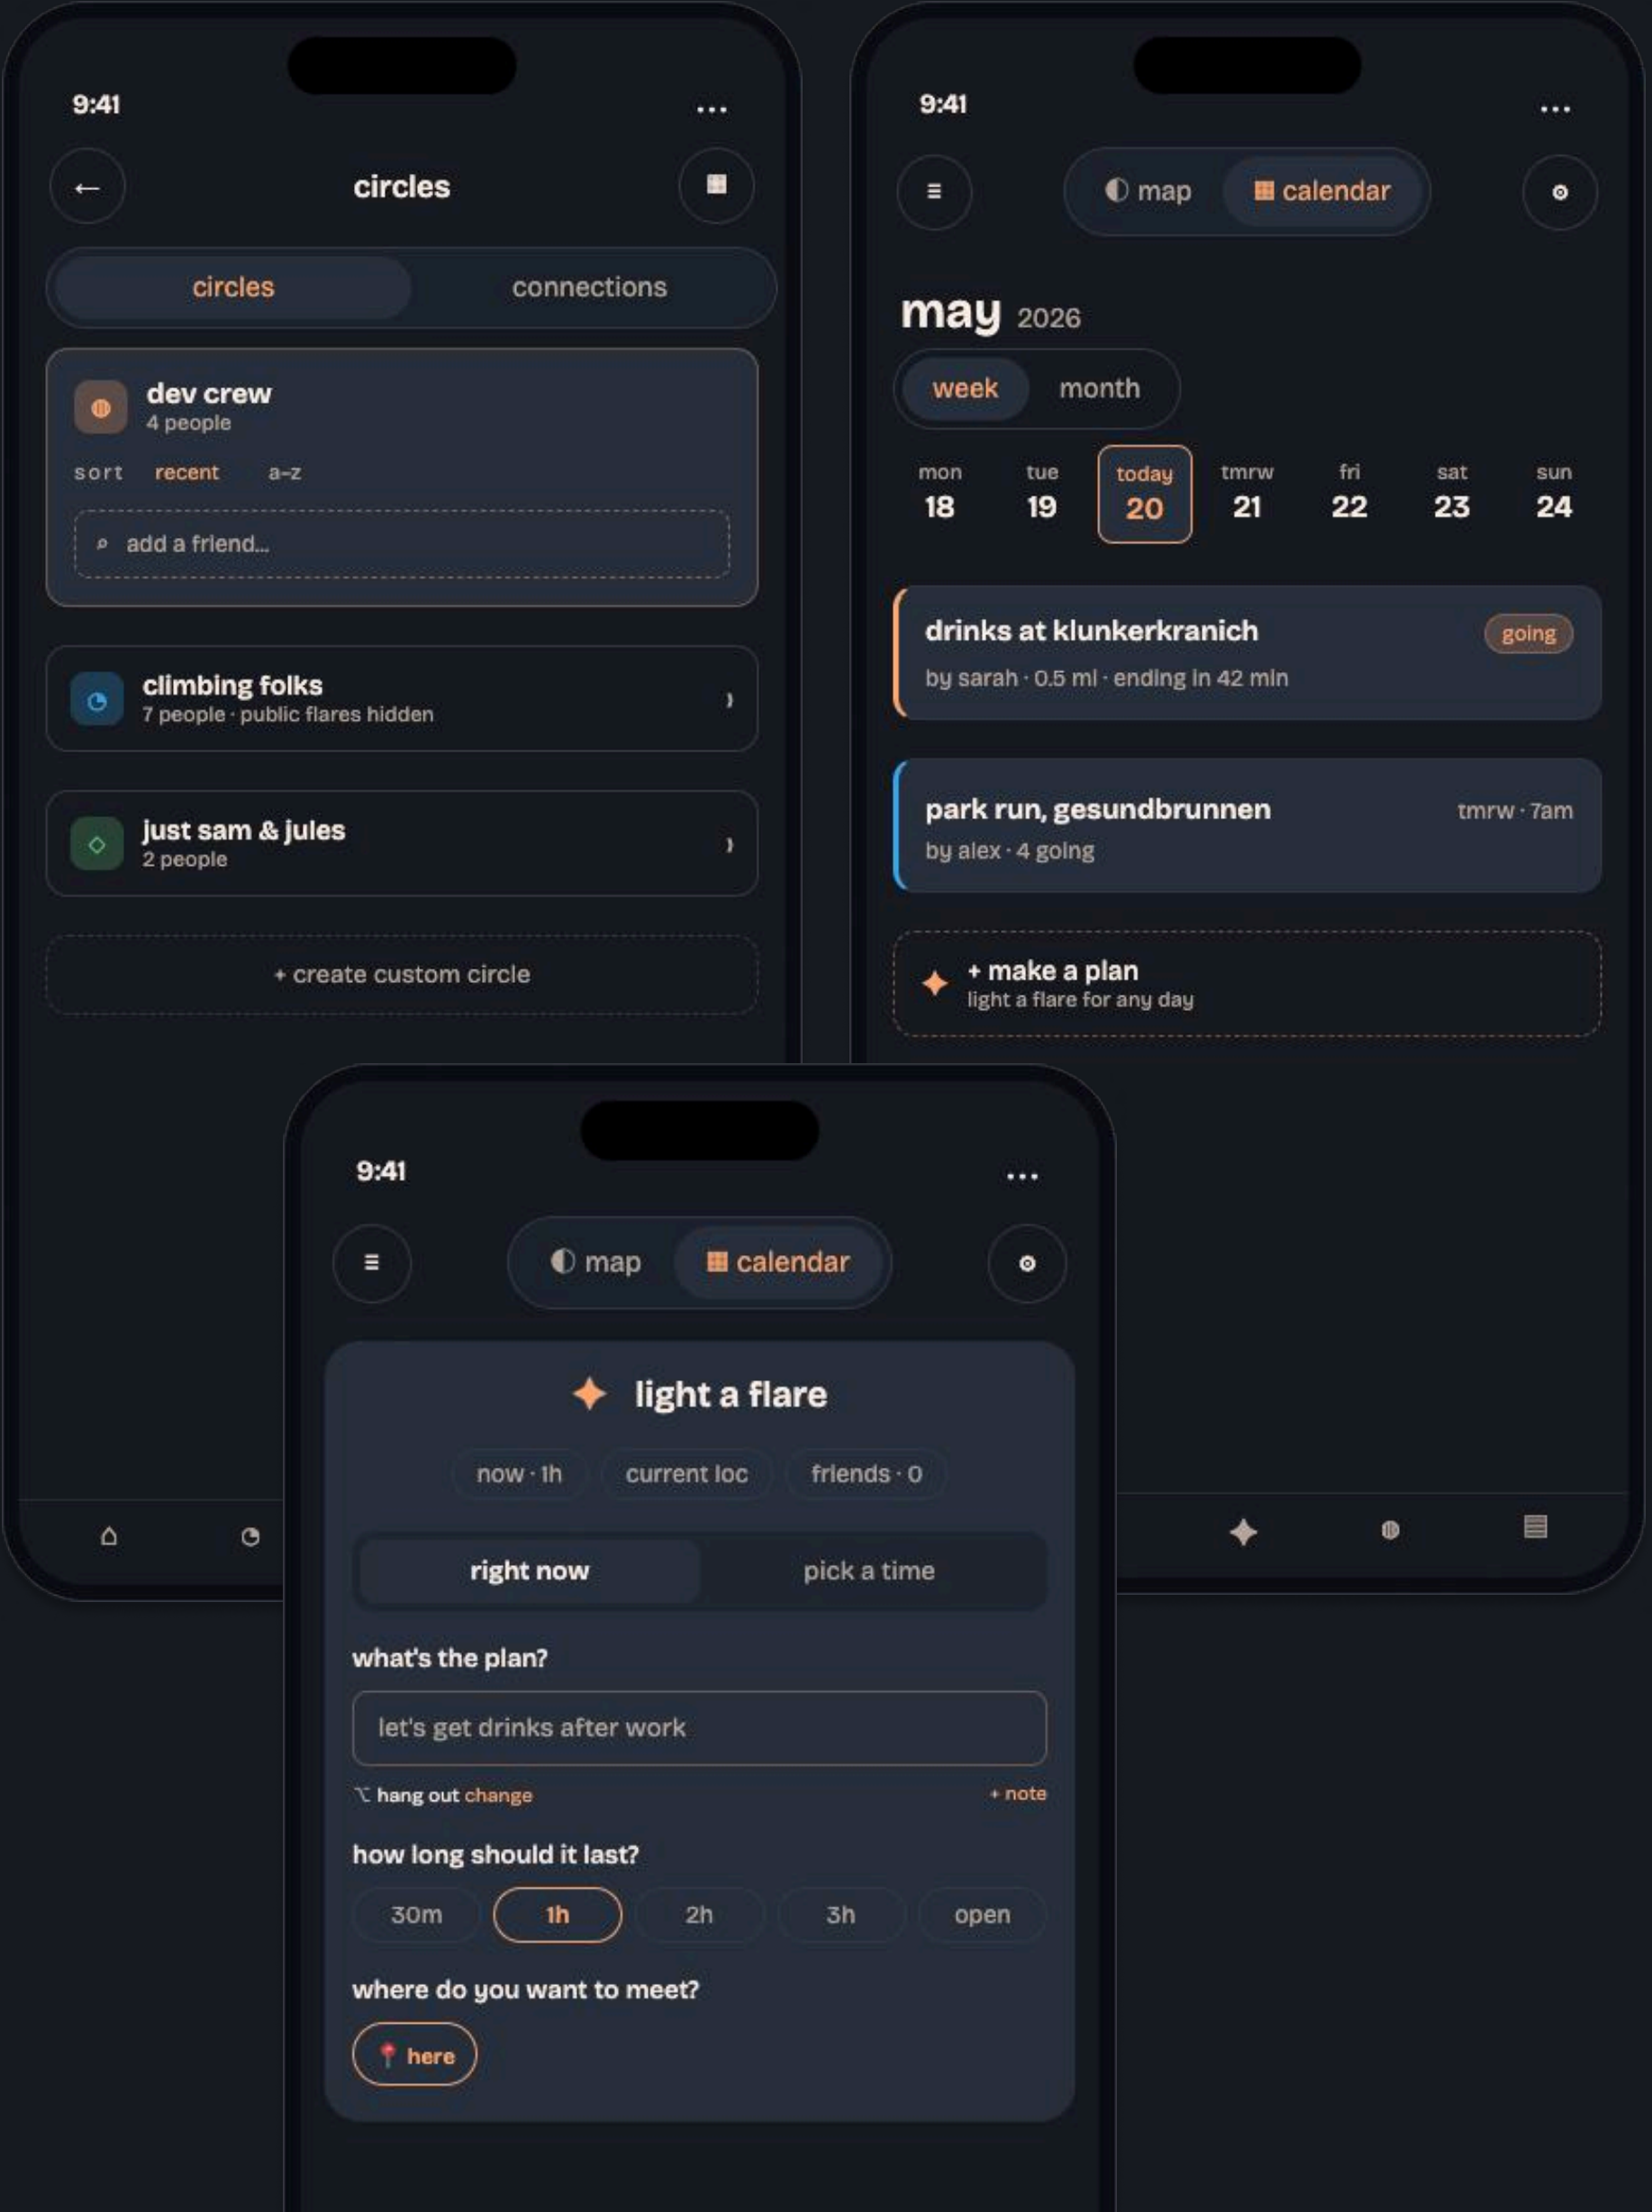

WHAT WE BUILT

- Map & calendar in React — one data source, two views.
- The "light a flare" creation flow, end to end.
- Join a flare flow
- Send / accept connections requests
- Manage friend circles, add custom circles
- Privacy UI with re-share controls
- Notification / account preferences

HOW WE STEERED AI

- CC + Codex to define architecture & spike components before implementing.
- AI-assisted tests & audits (a11y, code review) before merge.
